Amy,

It sounds like things have escalated even more over the weekend. Yuval wanted me to send you the information on the Elbit Groundeye sensor they have. This is the system that he talked about that has a manned aircraft version, but they have the 90-degree ground system available for immediate use. It may be something you would be interested in when it comes time to prosecute cases in the future.

Matt (SkySkopes) updated me last week about the legal review of using them at the protest site. Is there an update that you could share on if/when they could be used?

Let me know if there is anything I can do to help.

Terry,

Following on our chat today, attached is the GroundEye datasheet which may support their need.

Currently only the fixed 90deg solution (8 region of interest) is available for immediate response and this is actually what they need I believe.

Please let me know if DES has any questions. We are available for a conference call at any day and time.

I wish you a Happy and relaxing Thanksgiving!

Yuval
